

Applications of Arakelov Geometry in the Arithmetic of Abelian Varieties

by

Jacob Monzel

A thesis submitted in partial fulfillment
of the requirements for the degree of

Master of Science

Courant Institute of Mathematical Sciences
New York University

Spring 2025

Fedor Bogomolov

Contents

Acknowledgments	3
1 Introduction	7
2 A Primer on Heights on Abelian Varieties	9
2.1 Heights on Projective Space	9
2.2 Heights on Projective Varieties	11
2.3 Heights on Abelian Varieties	13
2.4 Metrized Line Bundles (Optional)	15
3 A Primer on Intersection Theory	17
3.1 Coherent Sheaves	17
3.2 Ample and Very Ample Line Bundles	19
3.3 Intersection Numbers	19
3.4 Numerical Equivalence and Ample Line Bundles	20
4 A Primer on Arithmetic Intersection Theory	21
4.1 Algebraic Preliminaries	21
4.2 Analytic Preliminaries	25
4.3 Arithmetic Intersection Theory	27
4.4 Axiomatic Approach to Faltings Height (Optional)	29
4.5 Faltings Height via Arithmetic Chow Groups (Semi-Optional)	30
5 Diophantine Approximation on Abelian Varieties	31
5.1 What is Diophantine Approximation?	31
5.2 The Product Theorem	31
5.3 Theorem I	33
5.4 Theorem II	33
6 The Extension of Néron-Tate Height via Adelic Metrics	35
6.1 Adelic Metrics	35
6.2 Arithmetic Ampleness	36
6.3 Measures	36
6.4 Volumes	36
6.5 Equidistribution	36
6.6 Extending Néron-Tate Height to Integral Closed Subschemes	36

7	Equidistribution of Small Points on Abelian Varieties	37
7.1	Preliminaries and Statement of Main Theorem	37
7.2	The Equidistribution Theorem for Small Points	38
7.3	A Geometric Lemma	39
7.4	Proof of Main Theorem and Bogomolov's Conjecture	40
A	Non-Archimedean Analytic Spaces	43
A.1	The Spectrum of a Commutative Banach Ring	43
A.2	Affinoid Spaces	46
A.3	Analytic Spaces	46
	References	46
